## **John Bernhard Leiberger (1853–1913) notes on Oregon specimens HIBDA.0011**

The Hunt Institute is committed to making its collections accessible for research. We are pleased to offer this digitized version of an item from our Archives.

### *Usage guidelines*

We have provided this low-resolution, digitized version for research purposes. To inquire about publishing any images from this item, please contact the Institute.

### *About the Institute*

The Hunt Institute for Botanical Documentation, a research division of Carnegie Mellon University, specializes in the history of botany and all aspects of plant science and serves the international scientific community through research and documentation. To this end, the Institute acquires and maintains authoritative collections of books, plant images, manuscripts, portraits and data files, and provides publications and other modes of information service. The Institute meets the reference needs of botanists, biologists, historians, conservationists, librarians, bibliographers and the public at large, especially those concerned with any aspect of the North American flora.

Hunt Institute was dedicated in 1961 as the Rachel McMasters Miller Hunt Botanical Library, an international center for bibliographical research and service in the interests of botany and horticulture, as well as a center for the study of all aspects of the history of the plant sciences. By 1971 the Library's activities had so diversified that the name was changed to Hunt Institute for Botanical Documentation. Growth in collections and research projects led to the establishment of four programmatic departments: Archives, Art, Bibliography and the Library.

#11

#3  
The original was found  
later + found June 1966

This catalogue supplants  
original which appears  
to have been lost in the  
mails between Athol, Idaho  
and Washington, D.C.

Elevations are given  
approximately. Localities  
are accurate in a general  
way. They do not always  
imply a precise spot, rather  
an area 3 or 4 miles in  
diameter with the locality  
indicated as the central point.  
Dates are indicated by month only.
